

Styrax japonicus

Výška	10 - 15 m
Šírka	8-10m
Koruna	broad pyramidal to oval, half-open crown, capricious growing
Kôra a vetvy	twigs yellow-brown to brown, bark dark grey, slightly grooved
Listy	oval, ovate, diamond-shaped to elongated-ovate, glossy green, 3 - 11 cm
Kvety	in pendent racemes, white with yellow stamens, 1.5 - 2.5 cm, June/July, fragrant flowers
Plody	ovoid drupe
Tríne	Žiadny
Jedovatosť	Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá
Typ pôdy	light loamy and humic soil
Spevnené plochy	Netoleruje spevnené plochy
Zóna odolnosti	6b (-20,5 do -17,8 °C)
Odolnosť voči vetru	fairly
Ostatná odolnosť	Odolné mrazu (WH 1–6)
Stromy pre zvieratá a hmyz	Odolné mrazu (WH 1–6), Plody ako potrava pre vtáctvo
Použitie	stromy do nádob, strešné záhrady
Tvar	Vysokokmeň, Vetvený, Viackmeň
Pôvod	Eastern Asia

Somewhat variable width, large shrub to medium-size tree with a broad pyramidal to oval crown that grows to 10 to 15 m. Young twigs yellow-brown to brown, older bark dark grey, slightly grooved when mature to reveal orange bast. The leaves are vary greatly in shape and size. From oval to elongated-ovate or diamond-shaped and 3 - 11 cm long. They are glossy green and scarcely change colour in autumn. The flowers hang in racemes from short lateral branches and open in June and July. They are 1.5 to 2.5 cm and white with yellow stamens. They have a strong, pleasant fragrance. This species blossoms very richly and is therefore very bee friendly. The flowers are followed by hard, ovoid grey-green drupes with a dark green calyx. A graceful park tree with a rich inflorescence.
