

Tilia x europaea 'Wratislaviensis'

Výška	30 - 40 m
Šírka	10-15m
Koruna	broad pyramidal, half-open crown
Kôra a vetvy	grey, grooved, twigs bare, green, later brown
Listy	heart-shaped, broad, slightly slanted base, dark green, 5 - 12 cm
Kvety	in umbels, Ø 7 - 10 cm, flowers 3 - 11 together, yellowish-white, June/July
Plody	round to oval, Ø 0.6 cm, greyish brown, felt-like hair
Tríne	Žiadny
Jedovatosť	Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá
Typ pôdy	all
Spevnené plochy	Toleruje spevnenie
Zóna odolnosti	4 (-34,4 do -28,9 °C)
Odolnosť voči vetru	good
Ostatná odolnosť	Odolné mrazu (WH 1–6), Odolné vetru
Stromy pre zvieratá a hmyz	Odolné mrazu (WH 1–6), Odolné vetru, Cenné pre motýle
Použitie	bulváre a široké ulice
Tvar	Vysokokmeň
Pôvod	Municipal nursery, Breslau, Germany, 1898
Synonymum	Tilia x vulgaris 'Wratislaviensis'

An old cultivar that grows into a large tree with a broad, pyramidal crown. A few very heavy main branches often grow from the heavy trunk and on those irregular lateral branches grow. The bark remains thin for a long time, and later develops deep grooves. The young, emerging leaves have a remarkable bright yellow colour that turns greener later. Due to its light leaves, this tree gives the impression in the summer that it is less than healthy. The autumn colour is orange-yellow to yellow. The large leaves have a short, tapered top and serrated edge. Yellowish white flowers appear in early summer, growing 3 to 11 together in pendulous umbels. 'Wratislaviensis' is prone to aphid infestation, resulting in honeydew and sooty mould.
