Very compact, slow-growing Dutch cultivar of *T. cordata* that, when grafted on a stem, grows to become a small, spherical tree with a crown diameter of max. 3 m. The young twigs are dark brown, a significant difference with the cultivar 'Lico'. The bright green leaves have a somewhat heart-shaped base and taper to a point at the top. They remain much smaller than those of the species, approx. 2 - 4 cm. Due to its modest size, 'Monto' is suitable for small front gardens, patio gardens, roof decks and plant containers. Was brought onto the market at the same time as 'Lico'. Winter hardiness zone: 4
