

Tilia kiusiana

Výška	4 - 6 (10) m
Šírka	3-5m
Koruna	broad pyramidal, dark, dense crown
Kôra a vetvy	young twigs softly hairy, bark brown-grey, rough
Listy	elongated oval, dark green, 5 - 8 cm long and 3 - 5 cm wide
Jesenné sfarbenie	Žltá
Kvety	in corymbs of 8 - 15 together, creamy-white, July, fragrant flowers
Plody	round, Ø 0.4 - 0.5 cm, brown hairy
Tríne	Žiadny
Jedovatosť	Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá
Typ pôdy	any, provided well-drained
Spevnené plochy	Toleruje spevnenie
Zóna odolnosti	7 (-17,7 do -12,3 °C)
Odolnosť voči vetru	good
Ostatná odolnosť	Odolné vetru
Stromy pre zvieratá a hmyz	Odolné vetru, Cenné pre motýle
Použitie	stromy do nádob, strešné záhrady
Tvar	Vysokokmeň, Viackmeň
Pôvod	Central and southern Japan

Grows from a broad shrub shape into a small tree with a broad, pyramidal crown. In culture about 5 m tall but grows to around 10 m in the wild. The young twigs have soft hairs. The hair disappears after the first season. The leaves are strikingly slender and small for the linden. They are elongated oval with a long pointed tip and 5 - 8 cm long and 3 to 5 cm wide. The top of the leaf is dark green, the underside is lighter. Both sides have soft hairs and the margin is serrated. In autumn the leaf turns dark yellow. In July, cream-coloured flowers stand together in corymbs of 8 - 15. They are followed by brown, hairy round fruits. A graceful linden with abundant inflorescence suitable for parks and as a solitary tree. If grafted on a standard, the tree can also be used on green borders.
