

Ulmus LUTECE ('Nanguen')

Výška	10 - 15 m, fast growing
Šírka	6-8m
Koruna	vase-shaped, half-open crown
Kôra a vetvy	twigs brown-green, bark brown-grey, smooth
Listy	broad ovate to broad obovate, dark green
Jesenné sfarbenie	Žltá
Kvety	in dense clusters, green, March/April
Plody	flat winged nutlets
Tríne	Žiadny
Jedovatosť	Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá
Typ pôdy	fertile, moist and airy, tolerates limy soil
Pôdna vlhkosť	Vhodné do vlhkých pôd, Odolné voči krátkodobému zaplaveniu
Spevnené plochy	Toleruje spevnenie
Zóna odolnosti	5 (-28,8 do -23,4 °C)
Odolnosť voči vetru	good
Ostatná odolnosť	Odolné mrazu (WH 1–6), Odolné vetru
Použitie	bulváre a široké ulice, pobrežné zóny, priemyselné oblasti
Pôvod	Jean Pinon, INRA, Paris, France, 2002
Synonymum	Ulmus 'Lutèce'

Medium-size to large tree with an ascending vase-shaped crown. Mainly young trees grow upwards well and on favourable sites, the tree can grow quickly. The tree eventually grows to a height of 10 to 15 m. The year-old twigs are brown-green, the older bark is brown-grey and smooth. The dark green leaf is broad ovate to broad obovate. The leaf margins are strikingly rough serrated. In autumn the leaf turns yellow. Lutèce was developed in the Netherlands by Hans Heybroek and Alterra but never released. During French tests into resistance to Dutch elm disease, this variety scored very well and was acquired and marketed by the French INRA. The tree also has good wind resistance.
