

Ulmus parvifolia

Výška	8 - 15 m
Šírka	10-15m
Koruna	round, dark, dense crown, capricious growing
Kôra a vetvy	twigs glossy grey-brown, bark brown-grey, peeling in small platelets
Listy	ovate, oval to obovate, slightly crooked, glossy dark green, 2 - 6 cm
Kvety	in dense clusters, green, September
Plody	flat winged nutlets, oval, green slightly red hue
Trne	Žiadny
Jedovatosť	Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá
Typ pôdy	fertile, moist and airy, tolerates limy soil
Pôdna vlhkosť	Vhodné do suchých pôd, Odolné voči krátkodobému zaplaveniu
Spevnené plochy	Toleruje spevnenie
Zóna odolnosti	6a (-23,3 do -20,6 °C)
Odolnosť voči vetru	fairly to good
Ostatná odolnosť	Odolné mrazu (WH 1–6), Odolné vetru
Použitie	bulváre a široké ulice, priemyselné oblasti
Tvar	Vysokokmeň, Viackmeň
Pôvod	Japan, Korea, China

A graceful, medium-size tree with a dense round crown. The tree usually grows to 8 - 15 m but in exceptional cases it can reach 18 m tall. The young twigs are glossy brown and slightly hairy, but rapidly become hairless. The old bark is brown-grey and peels off in small plates revealing the orange bast. The leaves are fairly small and glossy dark green. In southern regions of origin, the tree is almost evergreen but in a temperate climate always deciduous. The foliage falls in late autumn and takes on hardly any or no autumn colours. The tree blossoms in September with clusters of inconspicuous green flowers, followed by winged seeds. Its resistance to Dutch elm disease makes it worth considering as a park and avenue tree. It has a great adaptability to various soil types, tolerates a lot of warmth and is wind resistant.
