

Zanthoxylum americanum

Áno

Výška	4 - 8 m
Šírka	4-8m
Koruna	round, half-open crown, capricious growing
Kôra a vetvy	twigs brown and short-haired, bark grey
Listy	imparipinnate with 5 - 13 leaf segments, oval to ovate, dark green, 3 - 6 cm , feathered leaf
Kvety	in axillary clusters, yellow-green, April
Plody	fleshy round capsules, black, aromatic
Tríne	Áno
Jedovatosť	Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá
Typ pôdy	few requirements
Spevnené plochy	Netoleruje spevnené plochy
Zóna odolnosti	4 (-34,4 do -28,9 °C)
Odolnosť voči vetru	fairly to good
Ostatná odolnosť	Odolné mrazu (WH 1–6), Odolné vetru
Stromy pre zvieratá a hmyz	Odolné mrazu (WH 1–6), Odolné vetru, Cenné pre motýle
Použitie	stromy do nádob, strešné záhrady
Tvar	Vysokokmeň
Pôvod	Eastern North America

Grows from a shrub shape to small, sometimes multi-stemmed tree with a round crown. On the twigs there are two thorns under each bud. On mature bark, these thorns are sometimes visible as small bumps. The imparipinnate leaves consist of 5 to 11, sometimes 13 dark green oval to ovate leaf segments. On the leaf stem there are always 1 or 2 prickles where the leaf segments are attached. The axillary clusters of green-yellow flowers appear before the leaf development and are not very conspicuous. They are followed by black fruits. These are aromatic, very sharp tasting and have a numbing effect. Indians used to chew on the fruit to relieve toothache. It is for this reason it is known as the Toothache Tree. It is a quite inconspicuous park tree suitable for defensive planting. Has few soil requirements and is very hardy.
