Zelkova sinica

Výška	15 - 18 m
Šírka	10-15m
Koruna	round to fan-shaped, light, open crown, capricious growing
Kôra a vetvy	twigs glossy brown, bark brown to grey-green peeling in thin flat plates
Listy	ovoid to elongated, glossy green, 5 - 9 cm
Jesenné sfarbenie	Žltá
Kvety	inconspicuous , unisexual, monoecious, green, May
Plody	small obovate fruit, 0.5 - 0.6 cm, green, later brown
Tŕne	Žiadny
Jedovatosť	Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá
Typ pôdy	humic, moist and loamy
Spevnené plochy	Toleruje spevnenie
Zóna odolnosti	6 (-23,3 do -17,8 °C)
Odolnosť voči vetru	moderate to reasonable
Ostatná odolnosť	Odolné mrazu (WH 1–6)
Použitie	stromy do nádob, strešné záhrady
Tvar	Vysokokmeň, Viackmeň
Pôvod	Central and eastern China

Sturdy tree with a broad, round to fan-shaped crown. The trunk often has low branching and the half-open crown is formed by several heavy boughs. The young twigs are glossy brown and covered in dense woolly hair in the first season. The mature bark is brown to grey-green and peels off in thin, flat plates. The ovate to elongated leaf has a sharply serrated margin so the lateral veins terminate as a small thread-like point. Closely resembles Z. serrata but this has 8 to 14 lateral veins per leaf whereas Z. sinica has 7 to 12 lateral veins per leaf. The leaf is glossy green and turns brownish yellow in autumn. The tree blossoms with inconspicuous green flowers that appear in May, after the leaf development. They are followed by small obovate fruits.
