

Carpinus coreana

| | |
|---------------------|---|
| Výška | 4 - 6 (8) m |
| Šírka | 3-5m |
| Koruna | flat-topped spherical to round, dark, dense crown, capricious growing |
| Kôra a vetvy | young twigs red-brown, older branches light brown to grey and smooth |
| Listy | ovate to elliptical, 2 - 5 cm, dark green |
| Kvety | monoecious, April |
| Plody | in separate fruiting catkins |
| Trne | Žiadny |
| Jedovatosť | Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá |
| Typ pôdy | few soil requirements, preference for loamy ground, tolerates drought |
| Pôdna vlhkosť | Vhodné do suchých pôd |
| Spevnené plochy | Toleruje čiastočné spevnenie |
| Zóna odolnosti | 7b (-14,9 do -12,3 °C) |
| Odolnosť voči vetru | moderate to good |
| Použitie | malé záhrady |
| Tvar | Vysokokmeň, Viackmeň |
| Pôvod | Korea |

Very variable, large shrub to small tree with graceful, overhanging branches. The crown form varies from a very flattened spherical to round. The leaves are deeply veined, dark green on top and conspicuously lighter green on the underside. No remarkable autumn colours. The flower catkins are inconspicuous, but the light green fruiting catkins consist of relatively large bracts. In general, many fruiting catkins are formed. Root growth is relatively close to the surface. Has few soil requirements but flourishes best in loamy soils. Tolerates drought. *Carpinus coreana* probably has the variety status of *C. turczaninowii*, so a change of nomenclature can be expected.
